## Safestable shock absorbing stable flooring

Safestable is a wet-pour rubber surfacing system specifically designed for stables which offers unparalleled cushioning and support.

The surface will fit to any area regardless of shape or level and unlike some systems requires no joints or seams. Safestable is bonded securely to the stable floor and provides a waterproof seal wall to wall.

Safestable provides a cost effective and hygienic stable flooring which helps protect your horses joints and reduces dust and bacterial growth. The surface is durable, comfortable, anti-slip and easy to maintain.

Safestable requires less bedding than other flooring, meaning significantly less labour and quicker mucking out times. This reduction in both labour and bedding costs, paired with the health benefits for your horse, make Safestable a very sound investment.

### Typical uses

Safestable can be readily installed on both new and existing surfaces and can be opened for use typically within 24 hours of application. The surface is waterproof, so helping to avoid urine seepage and bacterial growth.

### Applications

Safestable can be used across all areas where horses are kept including:

- Stalls
- Stables
- Stable yards
- Access roads
- Paddocks

### Features and benefits

#### Installation

- Fits any shape with no seams
- Sealed wall to wall

#### Benefits

Safestable can protect your horses health while at the same time reducing your costs:

- 30mm surface thickness
- 3 stage flooring system
- Built in shock pad
- Improved comfort for resting
- Requires less bedding
- Reduces dust levels
- Helps prevent hock sores
- Mimics natural environment
- Quicker mucking out
- Less waste
- Prevents urine seepage
- Helps reduce odors
- Cleaner and safer than mats
- Anti-slip surface
- Very durable
- Easy to maintain
- Pays for itself very quickly
- Numerous health benefits

Helps protect your horse

Wall to wall seal

Reduces mucking out time

Surface mimics natural turf

## Performance

Safestable is a 3-stage shock absorbing resin system designed specifically for stable flooring. The wall-to-wall sealed surface provides a hygienic, easy to clean surface that saves labour and has many health benefits for your horse. The shock absorbing surface reduces the chance of injury and provides a more natural surface for your horse to stand on, whilst being firm enough to ensure that balance is not effected.

## Maintenance

The surface requires no additional maintenance to your normal mucking out procedures. Safestable cuts the time required for mucking out considerably and this combined with reduced bedding costs means that the surface could pay for itself in just one year.

## Preparation

Safestable can be either overlaid to existing surfaces (using an appropriate primer) or applied to new installations with a substrate designed to the appropriate British Standard (BS).

Our detailed specification advice sheets are downloadable from our website or can be requested by email or phone.

Before every new commission our Survey Department will visit and prepare a pre-installation report and are available to offer advice and answer your questions throughout the process.

## Quality Assurance

Safestable is supplied and laid within an ISO 9001 quality management system.

## Installation

Safestable is a 3-stage flooring system composed of the following layers:

1. Primed base layer: the existing sub-base is sealed with an appropriate primer to provide strong adhesion for the shock pad layer.
2. Shock absorbing layer: this specially designed cushion layer provides a comfortable resting place for your horse as well as helping to reduce injury and preventing hock sores.
3. Sealed top coat: This wall-to-wall layer seals the entire surface, preventing urine seepage and bacterial growth meaning further health benefits for your horse.

## Health and Safety

All of the materials used to install Safestable are non-flammable and chemically stable. The surface is cold-applied and therefore has no requirement for the use of heating equipment or hot materials.
